

When Health Matters

Mixing instructions for our 25 and 50 day SQ hCG complete Kits!
Thank you for ordering your hCG and supplies from us.

In an effort to help anyone involved with the hCG protocol, we have put together a special 25 and 50 day kits allowing you to do the 23 or 43 days exactly as per Dr. Simeons or to extend this to 25 or 50 days.

The Reason we did this is the way we buy the hCG. We buy only 5000iu at a better price than buying multiple smaller ampoules. It also makes mixing real easy.

Our 25-Day SQ Kit

Contains the following:

- 25-1cc. ½" diabetic needles
- 1 Large mixing syringe and needle
- 25 alcohol wipes
- 1-30cc bottle of Bacteriostatic water
- 1 empty sterile glass vial
- 1-5000iu ampoule of hCG

This is enough hCG and supplies for 25 injections of 1 cc at 200iu daily.

Our 50-Day SQ Kit Contains 2 of everything!

To get 200iu daily you will mix 1 ampoule of 5000iu hCG with 25cc of water. ($5000/25=200$)
That is enough for 25-1cc injections of 200iu hCG Daily.

Now to Mix, get everything ready. Throw out the **SODIUM CHLORIDE**

- 1) Remove the top of the hCG, water and Glass vial!
- 2) Using the Large syringe, attach the large needle for mixing,
- 3) Insert the large syringe into the **empty glass bottle** and pull back to the 10 mark. Do this twice. (This is done to remove the air making it easier to insert the water/hCG mixture.)
- 4) Insert the mixing needle into the water, remove 2cc,s, remove needle from water bottle.
- 5) Insert needle into the HCG, slow inject the water, then use the needle to help mix..
- 6) Using that same large syringe, withdraw that mixed water /hCG.
- 7) Now insert that mixture into the empty glass vial.
- 8) Repeat steps 4-7 just to be sure to get all the hcg. (you now have 4cc's in the glass vial)
- 9) Now just move 21cc of water into the glass vial.

To inject, fill one needle full, to the 100 mark, warm to body temp (put the needle under your arm). Once warm, remove, and inject slowly, taking 15-30 seconds for the injection.

You now have 1-25-cc bottle of mixed hCG and water. Enough for 25 injections. For the 50-day kits, just repeat once you are done with the first bottle. **Keep the mix refrigerated!**
